Tridium Launches Professional Services Group

January 23, 2013 - Richmond, VA - Tridium, the developer of the Niagara Framework, announces the formation of its Professional Services group to meet the increasing demand for consulting and education services. Tridium's Professional Services ("TPS") combines integration and development services and developer consultation services. The group will focus on new and existing OEM customers who want to deploy framework products in current and adjacent markets. Tridium's well-known and highly respected Tridium University education program will also roll up under this group.

Integration & Development:

Tridium's newly formed integration & development services group will enable OEM partners to save time and valuable resources by helping them develop unique and differentiated solutions and applications on the Niagara Framework. From architecture design and software development, to prototyping and testing, Tridium is committed to delivering quality products in a faster time to market, allowing customers to focus on their core competencies in applications and solutions. A primary area of focus is support for OEMs through development of applications, appliances and drivers to complete new solution offerings.

Developer Consulting:

Developer consulting offers expert consultation to Certified Niagara developers. Services include developer training, documentation, code samples, architecture reviews, and consultation for OEM developers. To ease and accelerate adoption of the Niagara Framework products, this suite of support services for the OEM developer and specifier community is available with direct access to core Niagara framework developers.

Tridium University:

Tridium University's curriculum provides a high level of intensive, hands-on, training. The goal is to help students develop the technical expertise necessary to effectively support a client base. To increase access to its world-class instructor led training, the Certified Training Partner program, with a current certified partner base of over 15,000, will be expanded in the US and abroad. Tridium plans to grow its training services in Europe and Asia, increase the breadth of courses offered, and develop on-line training modules to enhance customers' knowledge of the Framework.

"Our Tridium Professional Services is uniquely positioned to effect significant positive change for both new and existing customers," said, Wayne Tighe, Vice President of North American Sales. "By engaging the TPS team, customers will be able to drive business efficiencies by getting to market faster and cheaper."

The group will operate from the Tridium headquarters in Richmond, VA. "Tridium is excited to formally offer these services to customers," said Mike Luscombe, Vice President of Professional Services. "We believe a long term commitment to this suite of services will ease and accelerate adoption of our framework products, creating competitive advantage for our partner community."

About Tridium:

Tridium is the global leader in open platforms, application software frameworks, automation infrastructure technology, energy management and device-to-enterprise integration solutions. Tridium's configurable software frameworks extend connectivity, integration and interoperability to the millions of devices deployed in the market today and empower manufacturers to develop intelligent equipment systems and smart devices that enable collaboration and communication between the enterprise and edge assets. Tridium platforms allow users to build and manage complex monitoring, control, and automation solutions, including applications for energy management, telecommunications, M2M and smart services building control, facility management, industrial automation, medical equipment and physical security. The company is an independent business entity of Honeywell International Inc. More information is available at www.tridium.com.
