

Tridium's Niagara Framework® Surpasses Quarter Million Mark

Leading device-to-enterprise integration software reaches milestone

Richmond, Virginia – May 16, 2011 - Tridium Inc., the global leader in application software frameworks, automation infrastructure technology and device-to-enterprise integration solutions today announced its Niagara Framework has surpassed the quarter million deployment mark. Reaching this milestone reaffirms Niagara's position as the leading software platform enabling the functionality and value of smart devices and systems and connecting different components, operating systems and applications together.

The company attributes this milestone to the continued growth and expansion of Niagara's customer base and the adoption of the framework as both a development platform and an end-to-end solution in the areas of intelligent building automation, energy management, security, medical, retail, sustainability, M2M and smart devices.

Meeting the needs for a strategic, general-purpose automation and information architecture built on open standards, Niagara is easily managed and controlled over the Internet with a standard web browser and integrates diverse systems and devices into a unified platform - regardless of manufacturer or communication protocol. By adopting the Niagara platform to develop Internet-enabled equipment systems, smart devices and device-to-enterprise solutions, manufacturers are able to reduce development time and costs, build new service offerings, and create new business opportunities.

"Surpassing this mark is a true acknowledgement to the industry-leading capabilities and global acceptance of the Niagara Framework," said Steve Fey, president of Tridium. "We are delighted to reach this achievement as we continue our journey of being the leader in creating universal software frameworks that increase the functionality and value of smart devices.

"This milestone points to the right fit between our framework and our customers' needs, challenges and opportunities," said Marc Petock, vice president global marketing and communications of Tridium. "Surpassing this mark speaks to our customers' success. We look forward to continuing our partnership with each of them, as we support them on the way to the next quarter million."

Niagara software and hardware solutions are available from leading building control manufacturer's, system integrators and M2M providers worldwide.

About Tridium Inc.

Tridium is the global leader in open platforms, application software frameworks, automation infrastructure technology, energy management and device-to-enterprise integration solutions. Our technologies extend connectivity, integration and interoperability to the millions of devices deployed in the market today and empowers manufacturers to develop intelligent equipment systems and smart devices that enable collaboration and communication between the enterprise and edge assets.

The company's Niagara Framework® is the foundation that makes buildings work and perform better. Niagara integrates, centralizes, manages and controls today's diverse business systems such as temperature, humidity, ventilation, security and energy in any size building and environment. Niagara is creating better buildings---ones that are smarter, use less energy, are more efficient, have lower operating costs, are safer and contribute to a sustainable environment.

The company is an independent business entity of Honeywell International Inc.
